SEDATION INSTRUCTION SHEET

Remember, since your child has had a sedative;

1. He may be groggy or sleepy for several hours following his appointment.
2. Don't allow him to begin activities where physical coordination or skill are involved since his reactions are definitely slowed and he could injure himself.
3. Keep him under close observation (let him rest in the same room in which you are present) so that you will be available when he wakes up.
4. When your child gets hungry after his appointment, give him a liquid or soft diet first; if he tolerates with no nausea or vomiting then he may have a regular diet.
5. An upset stomach with some nausea may occur. However, if prolonged vomiting happens, let us know.
6. If your child seems to be having special problems please don't hesitate to call us.
